Product Description

These A/B loudspeakers have two independent 6 W loudspeaker systems and are suitable for sound systems where redundancy is required. In normal situations, both loudspeakers are powered by the same audio signal from independent amplifiers. For example, if line A fails, the other connected loudspeaker receives the signal from line B and vice versa.

A/B loudspeakers provide an economic and efficient solution for small areas compared to two separately installed ceiling loudspeakers.

There is a ceiling loudspeaker with fire dome and a cabinet loudspeaker, both models are EN54-24 certified.

Features / benefits LB7-UC06E-AB

- Two independent 6 W loudspeaker systems in one housing
- Compact ABS cabinet with metal front grille
- Two knock-out holes, at the top and bottom of the cabinet, for easy entry of cable or conduit
- EN54-24 certified
- Easy and hidden wall mounting by use of two screws delivered with the product

Features / benefits LC7-UM06E3-AB

- Two independent 6 W loudspeaker systems in one housing
- Standard supplied with metal fire-dome
- A safety cord attached to the fire-dome ensures for easy installation and provides reassurance after installation
- EN54-24 certified
